GMT paleoseismology vol 62 pdf - A turbidity current is most typically an underwater current of usually rapidly moving, sediment-laden water moving down a slope; although current research (2018) indicates that water-saturated sediment may be the primary actor in the process.. Turbidity currents can also occur in other fluids besides water.

Turbidity current - Wikipedia - May 1, 1960 (Sunday) The U-2 Incident began when an American U-2 spy plane, piloted by Francis Gary Powers, entered Soviet airspace ten minutes after takeoff from a U.S. base in Pakistan, at Peshawar. May 1960 - Wikipedia -
